information and that an Intranet site is routinely used for sharing information within a company or organization. Note that the Internet and Intranet includes a client server system having number identification, user name, addresses and browser related services/options.

Therefore, it would have been obvious to one of ordinary skill in the art to modify Hendricks' system to include the Internet Web site, electronic guide provided over the Internet, an Intranet site and one or more of number identification, user name, addresses and browser related services because an Internet web site is the mostly widely used source of various information and an Intranet site is routinely used for sharing information within a company or organization. Furthermore interacting with the Internet/Intranet involves processing and/or manipulating number identification, user name, addresses and browser related servers/options.

Considering claims 213-215, Hendricks discloses all the claimed subject matter above, except for e-mails as recited in the claims.

It is notoriously well known in the art that e-mails are routinely used to electronically transfer information between users.

Therefore, it would have been obvious to one of ordinary skill in the art to modify Hendricks' system to include e-mails for the typical advantage of utilizing a commonly used communication technique for sending and receiving information.
